

Anna Ling

(727) 250-8978 | anna.ling@rice.edu | linkedin.com/in/anna-ling-1a7675361 | github.com/annasophialing

EDUCATION

Rice University | *Houston, TX*

Expected May 2029

B.S. Mechanical Engineering, Computational Engineering Specialization

- Minors: Computational and Applied Mathematics, Spanish | GPA: 3.47/4.00 | National Merit Scholar | SAT: 1540
- Relevant Coursework: Engineering Computation (Python & Matlab), Differential Equations & Linear Algebra, Multivariable Calculus, Engineering Design Tools, Physics, Chemistry
- Activities: American Society of Mechanical Engineers, Society of Women Engineers, Duncan College

EXPERIENCE

Rice University Wireless Lab | *Undergraduate Researcher*

Aug 2026 – Present

- Conduct wireless sensing research under Prof. Ashutosh Sabharwal (ECE), working with a PhD mentor on bistatic radar sensing
- Built a Python signal-processing pipeline simulating human motion through an FMCW radar system, generating micro-Doppler spectrograms via Range FFT processing
- Developing the simulator as groundwork for machine-learning-based human motion tracking

Rice University School of Engineering and Computing | *Data Validation Assistant*

Oct 2026 – Present

- Validate and clean company and founder records in a university startup dataset, cross-referencing public records and primary sources
- Identify duplicates, discrepancies, and unverifiable entries, documenting provenance for each validated field

U.S. Merchant Marine Academy | *Research Assistant, Biochemistry Dept.*

Oct 2023 – Aug 2024

- Performed data analysis and authored manuscript sections for research on silver nanoparticle applications in water purification, under Prof. Ping Furlan.

learnSTEM | *Mentored Independent Researcher*

Jun 2024 – Sep 2024

- Wrote an independent research paper on glucose metabolism in yeast as a model for cancer cell metabolism, mentored by Clara dos Santos (Duke University, Silva Lab)

Rice University Formula SAE | *Chassis Subteam Member*

Jan 2026 – Present

- Design and model frame components in SolidWorks, iterating on tube geometry to meet FSAE structural equivalency requirements
- Make independent design decisions, including chassis material selection, on a newly formed subteam with limited established process

Brown University Pre-College Programs | *STEM Hybrid Assistant*

Jun 2026 – Jul 2026

- Supported high school students in computational physics, biology, computer science, and algebra; led instructional sessions independently

Pub at Rice | *Bartender*

Aug 2026 – Present

- Manage high-volume sales and maintain accurate financial records each shift at a fully student-run campus pub

Kumon North America | *Tutor*

Jan 2025 – Aug 2025

- Delivered individualized math and reading instruction to students ages 7–14, tracking weekly progress

TECHNICAL PROJECTS

Sushi Finder | *Python, Flask, SQL (SQLite), Google Places API, HTML/CSS, Git*

Sep 2026

- Built a Flask web app that pulls restaurant data from the Google Places API and ranks results with a Bayesian-adjusted rating, correcting for inflated scores from low review counts
- Added a SQLite database to store retrieved restaurant data and wrote SQL queries to analyze it

TECHNICAL SKILLS

Languages: Python, SQL, MATLAB, HTML/CSS

Libraries & Tools: NumPy, Matplotlib, Flask, SQLite, Git, Excel, Google Sheets, SolidWorks

Concepts: Signal processing (FFT, spectrograms), Bayesian averaging, relational databases, REST APIs

Spoken Languages: English (native), Spanish (proficient)
